Information

BTM T410 Cutting machine

Wanting to harvest flowers quickly and effectively under mesh? The BTM T410 cutting machine is the solution for you!

The BTM T410 cutting machine was designed by BTM decades ago in close cooperation with growers, so that it matches the wishes and expectations of its end users as closely as possible. We have continued to refine and adapt this successful concept, so that the T410 cutting machine meets all modern requirements.

Thanks to its robust construction, a long service life is guaranteed: the T410 cutting machine is built almost entirely from corrosion-resistant materials, combined with a carefully selected range of rock-solid controls. Its unique drive mechanism makes the T410 cutting machine very quiet in use and gives it low energy consumption, so a full working day of harvesting is possible without changing batteries. Together with our battery specialist, we guarantee a minimum of 400 charge cycles for our batteries!

Working with the T410 cutting machine is very easy. It is equipped with a simple control panel. In addition, every T410 cutting machine comes standard with a full-load stop function, allowing the machine to drive through the crop on its own: when it is full, it stops automatically, and as soon as flowers are removed, it starts driving again. Thanks to the open design of the T410 cutting machine, the risk of malfunctions caused by dirt and debris is eliminated.

The T410 cutting machine also meets all current occupational health and safety (ARBO) regulations in terms of ergonomics. The design includes space to place your feet, so there is no need to twist your back while harvesting. Easy transport and storage have been considered as well: thanks to its low weight, the T410 cutting machine can easily be stood upright for storage, and with a set of wheels it can be moved around easily while upright.

Specifications

- Worldwide more than 1000 in use
- Low energy consumption
- Premium materials, long service life
- Easy to operate
- Starts and stops automatically
- Compact for storage
